Project #11

MyHelloServlet.java (just dove right in after the little tutorial)

```
import java.io.IOException;
import java.io.PrintWriter;

import javax.servlet.ServletException;
import javax.servlet.annotation.WebServlet;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import java.sql.*;

/**
 * Servlet implementation class MyHelloServlet
 */
@WebServlet("/MyHelloServlet")
public class MyHelloServlet extends HttpServlet {
    private static final long serialVersionUID = 1L;

    //SQL stuff
    private Connection con;
    private Statement stmt;
    private String newQuestionText = "";
    /**
     * @see HttpServlet#HttpServlet()
     */
    public MyHelloServlet() throws SQLException{
        super();
        String connectionString = "jdbc:mysql://kc-sce-appdb01.kc.umkc.edu/eawwwd";
        String userID = "eawwwd";
        String password = "ZDkWx5Dydgwe";

        try {
            Class.forName("com.mysql.jdbc.Driver");
        } catch (java.lang.ClassNotFoundException e) {
            System.out.println(e);
            System.exit(0);
        }

        con = DriverManager.getConnection(connectionString, userID, password);
        stmt = con.createStatement();
    }

    /**
     * @see HttpServlet#doGet(HttpServletRequest request, HttpServletResponse
    response)
     */
    protected void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
        int i;
```

```

        ResultSet rs;
